Grande Prairie Crane Operator Certification

Grande Prairie Crane Operator Certification - The process to enable people in order to operate particular kinds of cranes is to take crane operator certification training to receive certification. The certification process consists of hands-on practice, classroom learning and a competency evaluation. Several training programs are existing for overhead cranes, mobile cranes, boom trucks, tower cranes, forklifts and various hoisting devices. Trainees will learn the basics of safety, equipment characteristics, and operational practices associated with these types of cranes.

Customized Practical Evaluation and Training:
Companies could request customized practical training and evaluation on-site at the work facility following the in-class session. Two operators would be trained at a time by an instructor. The length of time required for training would differ depending on the employer's levels of ability and equipment type, but generally needs one to two hours. The training would focus on practical skills like safe operating practices, planning the lift and correct rigging practices. Employers should pre-schedule the on-site session.

The training individual would receive an individual wallet certificate, while the company gets a wall certificate after completing the in-class instruction, practical operating instruction and assessment, and written examination. To be able to get certification, trainees need to have an 80% passing score on both written and practical exams.

The program consists of: Policies and regulations, instruction manuals; dangers of high voltage; safety issues; emergency rescue procedures; communications and signals; terms, types and components; pre-operational inspection; crane configuration and capacity; pre-lift set-up and planning; wire rope and rigging; hammerhead / luffing jib crane operations; fall protection; climbing cranes; First aid & CPR; WHMIS and crane maintenance.

The minimum prerequisites for becoming an overhead crane operator comprise possessing the mental and physical capability required to do crane work. Necessary capabilities consist of depth perception, normal field of vision, reaction time, coordination and manual dexterity. Prospective operators should not have the tendency to become dizzy. Operators who do not already have evidence of qualifications and experience need to obtain certification. Operators have to be qualified to operate the certain kind of equipment that they will be making use of to carry out their job.
