

## **Grande Prairie Boom Lift Training**

Grande Prairie Boom Lift Training - Elevated work platforms, also called aerial platforms, allow workers to perform jobs at heights which would otherwise be unreachable. There are different types of lifts intended for various site applications and conditions. If operated carelessly, elevated work platforms could lead to serious injury or death. The most common reasons for related accidents are electrocution, falls, crushed body parts and tip-overs. Lift operators must be trained completely in procedures in order to prevent accidents during the operation of lifts.

The Aerial Lift Safety course provides required resources to be able to help those needing to learn how to operate these devices more effectively. Through the course, participants would receive thorough instruction. Kinds of lift covered consist of scissor, articulating and boom supported aerial lifts. The video presents the right procedures operators should follow. Instruction focuses on protection against falls, pre-operational inspection, safe driving procedure and stability of the device.

The program addresses employee safety and equipment reliability. All instructional materials are compliant with state, government and provincial agency requirements and regulations. Course management and training methods would be taught. The trainer would also know the technical aspects of aerial lift safety.

Both practical training and classroom training are parts of the Aerial Platform/Boom Truck Training program. Both sessions should be finished successfully for the participant to be given a certificate of achievement.

The self-propelled boom-supported elevating work platforms are different from the self-propelled elevating work platforms in that they are able to position their work platforms totally beyond the base of the machine. The theoretical training component is almost identical for both types. The practical training part can be completed faster if only one kind of equipment is utilized.

### **Elevating Work Platform Training Program Objectives:**

For the safe operation of Boom-Type Elevating Work Platforms and Self-Propelled Elevating Work Platforms, boom lift training will help operators utilize their machines more effectively and will lessen the chances of accidents in the workplace. Trainees would review of company policies and applicable regulations, talk about Due Diligence, study Criminal Negligence and consequences to trainers, employers, workers and supervisors. Participants will review equipment features, stability, operating procedures, parking and fueling/charging procedures. Site-specific safety matters would be dealt with.
